EUA LAUNCHES DESIGN APPLICATION CONSULTING SERVICES

MILWAUKEE – Eppstein Uhen Architects (EUA) recently formed **EUA Design Application Consulting**, an extension of the firm that will provide peer consulting, software training, content creation services and supplemental modeling assistance for the Revit®-based Building Information Modeling (BIM) authoring platform. EUA Design Application Consulting will serve as a resource to organizations and professionals within the architectural, engineering, construction and facilities management community as well as product manufacturers and vendors that supply the construction industry.

More than 7 years ago, EUA embarked on a major initiative that changed the way the firm delivers and facilitates architectural projects. By migrating from an AutoCAD®-based drafting platform to the Revit®-based Building Information Modeling (BIM) authoring platform, EUA was a pioneer of a new era in project production and delivery. BIM is the latest, most sophisticated design delivery method that can explore a project's key physical and functional characteristics digitally – before it's built.

EUA has applied BIM-related techniques and technologies to over 750 real-world projects, arming the EUA Design Application Consulting team with unparalleled technical expertise, proven solutions, lessons learned and real-world experience. The team also has the ability to tap into the expansive knowledge and capacity of the entire EUA architectural staff.

EUA Design Application Consulting is fully up and running and ready to serve organizations that are interested in progressing their project delivery methods and increasing the value they can provide their clients. More detailed information can be found at <http://www.eua.com/consulting/da>.
